YILDIZ POLİETİLEN

2008 yılında sektöre yeni bir soluk olan ve kısa zaman içerisinde hedeflerine ulaşarak adını duyuran YILDIZ POLİETİLEN yaptığı üretimlerle Polietilen Fittings sektöründe emin adımlarla ilerlemektedir.

Yurt içi ve yurt dışına hizmet vermekte olan YILDIZ POLİETİLEN tüm alt yapı ve sulama sistemleri ek parça üretimini bünyesinde barındırmaktadır.

Kırıkkale Organize Sanayi Bölgesinde 15.000 m² alan üzerine inşa edilen 4.000 m² kapalı ve 10.000 m² alan üzerine inşa edilen 3.500 m² kapalı olmak üzere toplamda 25.000 m² alada 7.500 m² kapalı üretim tesisi ile uluslar arası standartlarda ve kalitede üretim yapmaktadır.

Her güne yeni adımlar atarak başlamayı kendine ilke edinmiş olan YILDIZ POLİETİLEN; 32 mm. den 1.600 mm. e kadar Elektrofüzyon Manşon üretim kapasitesini tamamlamış, 2018 yılınında 630 mm. Enjeksiyon üretim kapasitesini, alt yapısını tamamlamak üzere olduğu EF Vanalı Servis Te ve Branşman Semer imalatını hayata geçirmeyi hedeflemektedir.

İlham kaynağını alanında uzman ve deneyimli kadrosundan alan YILDIZ POLİETİLEN Yeni Ankara Merkez Ofisi ile ulaşım ve ticaretine hız katmıştır.

Ürünlerinde ve üretiminde istenilen kaliteye ulaşmış, TSE, WRAS, GOST, ISO 9001, ISO 14001 ve OHSAS uygunluk belgesine sahip, her geçen gün kendisini geliştiren, “Kalite; Üretimin temel esasıdır.” ilkesi ve bilinci ile hareket eden bir Markadır. Yurt içi ve yurt dışına hizmet vermekte olan YILDIZ POLİETİLEN tüm HDPE Polietilen alt yapı ve sulama sistemleri ek parçalarını uluslar arası standartlarda üretmektedir.

YILDIZ POLİETİLEN was established in Ankara to manufacture High Density Polyethylene (HDPE) pipe fittings in 2008.

YILDIZ POLİETİLEN has grown from a local supplying company to a well known international brand. The company manufactures butt fusion fittings, electrofusion fittings, steel flanges and transition fittings at various nominal diameters starting from 20mm up to 1600mm with multiple Nominal Pressure/Standard Dimension Ratios.

YILDIZ POLİETİLEN, a brand that follows technology developments and renews itself continuously, has been leading the market by using the latest technologies and a team of experts in the area and continue to provide a significant amount of products in the construction sector and waterworks. Our brand products are used for huge projects in more than 50 countries in Africa, Asia, Eurasia, Europe, and The Middle East.

All the company's products go through a strict quality control system. A laboratory that covers the entire range of necessary tests has been set up to conduct the tests of the raw materials and fittings. The company has been awarded International certificates such as ISO, OHSAS, GOST and WRAS.

The vision and strategy of YILDIZ POLİETİLEN is to give priority for the demand of the market and our customers. By persistently conducting in-depth analysis of the needs and challenges of the sector, we envisioned to have a structure that can confidently address any question of our customers.

أنشئت شركة يلدز بوليثلين في أنقرة لتصنيع ملحقات الأنابيب البولي ايثيلين عالية الكثافة في عام 2008. نمت يلدز بوليثلين من شركة توريد محلية إلى علامة تجارية دولية معروفة. تقوم الشركة بتصنيع تركيبات الأنابيب البولي ايثيلين عالية الكثافة بأقطار تبدأ من 20 مم وحتى قطر 1600. تعمل شركة يلدز بوليثلين، وهي علامة تجارية تتبع التطورات التكنولوجية وتجدد نفسها باستمرار، في قيادة السوق من خلال استخدام أحدث التقنيات وفريق من الخبراء في المنطقة وتواصل تقديم كمية كبيرة من المنتجات في قطاع الإنشاءات والأشغال المائية. يتم استخدام منتجات علامتنا التجارية للمشاريع الكبيرة في أكثر من 50 دولة في أفريقيا وآسيا وأوروبا والشرق الأوسط. جميع منتجات الشركة تمر عبر نظام صارم لمراقبة الجودة. تم إعداد مختبر يغطي مجموعة كاملة من الاختبارات اللازمة لإجراء اختبارات للمواد الخام والتركيبات. حصلت الشركة على شهادات دولية مثل ISO OHSAS & WRAS تتمثل رؤية واستراتيجيتنا في إعطاء الأولوية لمتطلبات السوق وعملائنا من خلال إجراء تحليل متعمق لاحتياجات وتحديات القطاع.

YILDIZ POLIETILEN a été créée à Ankara pour la fabrication de raccords de tuyauterie en polyéthylène haute densité (PEHD) en 2008.

YILDIZ POLIETILEN est passée d'une entreprise d'approvisionnement locale à une marque internationale réputée. La société fabrique des raccords à bout lisse, des raccords pour l'électro-soudure, des brides en acier et des raccords de différents diamètres nominaux allant de 20 mm à 1600 mm.

YILDIZ POLIETILEN, une marque qui suit les évolutions technologiques et se renouvelle en permanence, domine le marché en utilisant les dernières technologies et une équipe d'experts dans le domaine et continue de fournir une quantité importante de produits dans le secteur de la construction et des installations hydrauliques. Nos produits de marque sont utilisés pour de grands projets dans plus

de 50 pays en Afrique, en Asie, en Eurasie, en Europe et au Moyen-Orient.

Tous les produits de la société sont soumis à un système de contrôle qualité strict. Un laboratoire couvrant toute une gamme d'essais nécessaires a été mis en place pour effectuer des essais sur les matières premières et les raccords. La société a reçu des certificats internationaux tels que ISO, OHSAS, GOST et WRAS.

La vision et la stratégie de YILDIZ POLIETILEN est de hiérarchiser les demandes du marché et de nos clients à travers une analyse en profondeur des besoins et des défis du secteur.

Компания **YILDIZ POLIETILEN** была основана в Анкаре для производства трубных фитингов из полиэтилена высокой плотности (HDPE) в 2008 году.

YILDIZ POLIETILEN вырос из местной компании-поставщика в известный международный бренд. Компания производит фитинги для стыковой сварки, электросварные фитинги, стальные фланцы и переходные фитинги с различными номинальными диаметрами от 20 мм до 1600 мм с несколькими номинальными давлениями / стандартными размерами.

YILDIZ POLIETILEN, бренд, который следит за развитием технологий и постоянно обновляется, лидирует на рынке, используя новейшие технологии и команду экспертов в этой области, и продолжает предоставлять значительный объем продукции в строительном секторе и на водопроводных станциях. Продукция нашего бренда используется для крупных проектов в более чем 50 странах Африки, Азии, Евразии, Европы и Ближнего Востока.

Вся продукция компании проходит строгую систему контроля качества. Для проведения испытаний сырья и фитингов была создана лаборатория, которая охватывает весь спектр необходимых испытаний. Компания была удостоена международных сертификатов, таких как ISO, OHSAS, ГОСТ и WRAS.

Видение и стратегия YILDIZ POLIETILEN состоит в том, чтобы отдавать приоритет потребностям рынка и наших клиентов. Постоянно проводя глубокий анализ потребностей и проблем отрасли, мы предполагали, что у нас будет структура, которая сможет уверенно решать любые вопросы наших клиентов.

"Yıldız bize, Biz Su'ya yön gösteriyoruz..."
"The stars show us the way, we show way to the water..."

Introduction

YILDIZ POLIETILEN is established in Ivedik Industrial Zone to manufacture HDPE Pipe Fittings in 2008. Our Headquarter is located in ANKARA.

We are a leading manufacturer and exporter of HDPE pipe fittings and acquired an extensive experience in this sector.

YP fittings are manufactured according to the international standards.

Vision and Mission

To give priority for the demand of the market and our customers, client-oriented and to be a leading company in the market.

Quality Policy

YILDIZ POLIETILEN Co. Ltd. is a brand that acts with the consciousness and principle of "Quality is the basis of Production".

Ensuring efficient use of natural resources, providing maximum care and bringing positive value to the environment are our primary and most important policies.

WHY CHOOSE US?

Certified Products

We are proud to be an ISO and WRAS Certified company. We have received **ISO 9001:2008** Certification for Quality Management System, **ISO 14001:2004** Certification for Environmental Management System, **OHSAS 18001:2007** Certification for Occupational Health and Safety Management System and **WRAS** Certificate.

Competitive Prices

Flexible system of discounts for wholesale purchase, discounts for regular customers and the most attentive approach to each client.

Prompt Reply

We address all your questions/inquiries within 24 hours.

Direct from the Manufacturer

Buying directly from the factory ensures you get 100% factory warranty for the entire warranty period. It also makes you get the products with the cheapest price.

No MOQ

We accept low order quantities too.

ELEKTROFÜZYON MANŞON ELECTROFUSION COUPLER

MANCHON ES / ЭЛ.СВАРНАЯ МУФТА / وصلة لحام كهربائي

ELEKTROFÜZYON (EF) MANŞON KAYNAK PROSESİ

Kaynak talimatlarına sırası ile riayet ediniz.

Madde 1 Kaynak yapılacak EF Makine için gerekli şartlar

- 1) Giriş voltaj değeri: **190-240 V.**
- 2) Giriş Frekansı: **50 Hz.**
- 3) Güç kaynağınız
3-1- **7,5 kVA** dan büyük olmalıdır.
3-2- En az **25A** sigorta olmalıdır.
3-3- Güç kaynağınız da topraklı priz olmalıdır.
- 4) Uzatma kablosu kullanıldığında **3x2,5** kesitinde kablo olmalı ve azami **10 mt** yi aşmamalıdır.
- 5) Kaynak makinesi soketi yıpranmış ya da kırık olmamalıdır. Manşon pimi ile soket arasında boşluk, gevşeklik olmamalıdır.

KAYNAK USTASININ EF KAYNAK EĞİTİMİ ALIMIŞ OLMASI GEREKMEKTEDİR!

LÜTFEN KAYNAK PROSEDÜRLERİNE VE ZAMANLARINA UYUNUZ!

HATALI YAPILAN BİR MANŞON KAYNAĞINDA HATANIN DÜZELTİLMESİ 4 KATI ZAMAN VE MALİYETE SEBEP OLACAKTIR!

Madde 2 Kaynak yapılacak malzemeler için gerekli şartlar

- 1) Kaynak yapılacak malzeme ile manşon üzerinde ki SDR-PN değeri (*Küçük çaplarda yaklaşık değer PN16-10*) aynı olmalıdır.
- 2) Kaynak yapılacak malzeme ve borunun toleransı dar olmalıdır.
- 3) HDPE Harici pp, ppr, pvc gibi diğer malzemeler ile kaynak yapılmaz.
- 4) Montaj yapılacak bölgenin sıcaklığı 0° ile 45° C aralığında olmalıdır.
- 5) Boru vb. kaynak yapılacak malzeme kendi eksenine dik açı yapacak şekilde olmalıdır.
- 6) Eğer kesme işlemi yapılacak ise plastik malzeme kesmek için uygun dişleri olan bir testere kullanılabilir.
DİKKAT!
Borunun düzgün bir şekilde kesilmemesi, Manşonda ki metal sargıların belli bölgelerde boruya temas etmemesine neden olur. Bu ise aşırı ısınmaya ve erimiş malzemenin kontrolsüz bir şekilde akmasına yol açabilir.

Madde3 Kaynak sırasında izlenecek yol

- 1) Kaynak alanını belirlenerek borunun veya fittings üzerine işaretlenmelidir. Manşonun ucundan orta noktasına kadar olan mesafe **kaynak alanıdır**.
- 2) Borunun veya fittingsin yüzeyi boru çizgisinin silineceği şekilde talaş oluşuncaya kadar kazınmalıdır. Boru veya fittingsin ucunda talaş kalmamasına dikkat ediniz.
- 3) Yüzeyi kazınmış olan boru veya fittingsin kir, toz, yağ vb olumsuzluklardan arındırınız. Kaynak işlemine başlamadan önce manşonun içini ve borunun yüzeyini temizleme mendili temizleyin.
- 4) Boru veya fittings ile manşonun bağlanması sırasında malzemeler birbirine göre kesinlikle düz olmalıdır. Eğik tutmayın.
- 5) Montaj yapılacak Boru veya fittingsin **oval olmamasına** dikkat ediniz. Ovallık var ise ovallık kelepçesi takarak ovalliği azaltın.
Borunun çap ölçümünü çeşitli noktalardan kontrol ederek ovallik olup olmadığını öğrenebilirsiniz.
- 6) Boru veya fittingsin işaretlenmiş ve temizlenmiş bölgesi manşonun içine rahatlıkla girmelidir. Eğer girmiyorsa tekrar kazıma işlemi yapın.
- 7) Boru veya fittings manşon içine girildikten sonra rahatlıkla döndürülebilir olmalıdır. Kaynak yapılacak malzemelerin kasıntıda olmaması gerekir.
- 8) Eğer EF Manşon ile tamirat yapıyorsanız kaynak yapılacak borudan su gelmediğinden ve ıslak olmadığından emin olunuz. Su sızıntısı kesilmeden ve kurulamadan kaynak yapmayınız. Aksi taktirde kaynak olmayacaktır.
- 9) Manşon kaynak talimatlarına sırası ile riayet edilmiş ve her hangi bir problem oluşmamış ise EF Manşon üzerinde ki kaynak bilgileri manuel olarak yada barkod okuyucu ile EF Kaynak Makinesine girilerek kaynak işlemine başlayabilirsiniz.

Elektrofüzyon manşonların üzerinde kaynak indikatörleri (meme) bulunmaktadır. Kaynak işlemi başladıktan sonra dışarı çıkan bu memeler kaynak işleminin tamamlandığını gösterir. Kaynak işlemi esnasında herhangi bir hata oluşur ise eriyen PE malzeme etrafa sıçrayabilir. **Bu nedenle güvenlik açısından, kaynak işlemi esnasında en az 1 m uzakta durmaya dikkat edin.** Kaynak işlemi herhangi bir nedenle (enerji kesintisi, vb.) kesintiye uğrar ise kaynaklı parçanın soğuması için yeteri kadar beklendikten sonra kaynak işlemine devam edilebilir.

ELECTROFUSION (EF) COUPLER FUSION PROCESS

Follow the fusion instructions in order.

Article 1: Requirements for EF Machine to be fused

- 1) Input Voltage: **190-240 V**
- 2) Input Frequency: **50 Hz.**
- 3) Your Power Source:
 - 3-1- must be greater than **7,5 kVA.**
 - 3-2- must have at least **25A** fuse.
 - 3-3- must have at least **25A** fuse.
- 4) When extension cord is used, the wire gage should be **3x2.5** and it should not exceed **10 m** maximum.
- 5) Processor lead should not be worn or broken. There should be no gap between the Coupler pin and the Processor lead.

PERSONS RESPONSIBLE FOR THE JOINING OF POLYETHYLENE PIPE BY FUSION METHODS MUST HAVE RECEIVED FUSION TRAINING!

PLEASE FOLLOW THE TIME AND PROCEDURES OF THE FUSION CAREFULLY!

TO FIX AN ERROR BEING DONE DURING A COUPLING FUSION WILL COST 4 TIMES MORE TIME AND COSTS!

Article 2 Requirements for materials to be fused

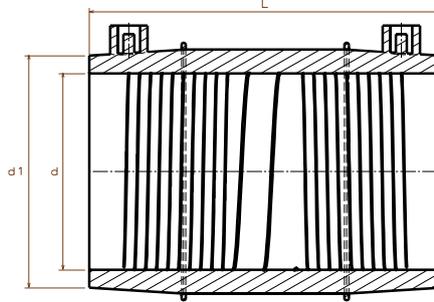

- 1) The SDR-PN value on the Coupler and the material to be fused (Approximate value PN16-10 in small diameters) should be the same.
- 2) The tolerance of the pipe and the material to be fused should be narrow.
- 3) Should not be fused with other non-HDPE materials such as pp, ppr and pvc
- 4) The temperature of the area to be installed should be between 0° and 45°
- 5) The material to be fused like pipe etc. should be perpendicular to its axis.
- 6) If cutting process is to be done, a saw with appropriate teeth can be used to cut the plastic material.

CAUTION:

Improper cutting of the pipe will cause the metal windings in the coupler to not contact the pipe in certain areas. This can lead to overheating and uncontrolled flow of molten material.

Article 3 Procedure to follow during fusion

- 1) Identify the fusion area and mark on the pipe or the fitting.
The fusion area is the distance of the coupler end to the center of the coupler.
- 2) The surface of the pipe or the fitting must be scraped until the pipe line is wiped off. Make sure that the pipe or fitting ends is clean and free of any dirt or chips.
- 3) Remove any dirt, dust, oil etc. from the scraped surface of the pipe or fitting. Before starting fusion process, clean the inside of the coupler and the surface of the pipe with a clean towel.
- 4) When joining pipes or fittings to the couplings, the materials must be absolutely level with respect to each other. Do not hold them oblique.
- 5) Make sure that the pipe or fitting to be installed is not out-of-round. If it is found to be out-of-round, reduce the ovality by attaching the oval clamp.
You can check the diameter of the pipe from various points to find out if there is an out-of-round condition.
- 6) The marked and cleaned area of the pipe or fitting should fit into the coupler easefully. If not, start the scraping process again.
- 7) The pipe or fitting must be easily rotatable after being inserted into the coupler. The materials to be fused must be smooth.
- 8) If you are repairing with EF coupling, make sure that no water comes out of the pipe to be fused and it is not wet. Do not fuse before the water leak is cut and dried. Otherwise, fusion process will not take place.
- 9) If the coupling fusion instructions are followed in order and there are no problems, you can start the fusion process by entering the fusion data on the EF coupling manually or by barcode scanner into the EF welding machine.
- 10) Fusion indicators are located on the electrofusion couplers. These indicators that emerge after starting the fusion process indicates that the fusion process is complete. If any error occurs during the fusion process, the melted PE material may splash around. **Therefore, for safety reasons, be sure to stop at least 1m away during the fusion process.** If the fusion process is interrupted for any reason (power cut, etc.), the fusion process can be resumed after waiting for the welded piece to cool down.
